

DAKTRONICS, INC. RESCUE PLAN CHECKLIST

What do you do if someone falls and becomes suspended on your Job Site? Would you know how to get that person down? A rescue plan helps everyone understand what to do before a fall.

Following are some important questions to ask about a rescue plan. These questions should be asked prior to work start up.

- Gain an understanding of the physical environment you will be working in

- Determine the proximity of a professional rescue team.

- Determine if 911 works from the area where you would be calling. You may need to contact local emergency services to determine 911 availability and approximate response time to your location.

- Determine the best street address access/ site gate number or letter to direct Emergency responders to your emergency.

- Understand the type of rescue that may be necessary (lowering a victim from a ladder, platform or man basket).

- Determine who is trained to do the rescue.

- Decide if the rescuers will be on-site or stand-by. If stand-by, take emergency response times from above into consideration when developing site action plan.

In addition to having a plan, it is also important to have rescue equipment and supplies on site and ready to be used. If you have questions or concerns please contact your Supervisor and Corporate Safety.

- Are there suspension Trauma Straps on each of the harness involved in the work being done at height?
- Is there a scissors lift for rescue?
- Is there a ladder available for rescue?
- Is there an Aerial lift for rescue?
- Is there a First Aid Kit on site? Where is it stored?
- Is the Rescue Plan Action Form filled out?

Accident/Incident Action items (when a fall has happened). *Single employee on site.*

Establish the offsite rescue assistant,(who is assisting you with the rescue plan for this jobsite).

Is the Rescue Plan Action Form filled out and has it been provided to the offsite rescue assistant.

Both Parties must follow the plan and stick to it. Some reallocation of work load may be necessary for the offsite assistant to maintain the contact intervals set up in the plan.

Post-Accident / Incident Investigation Process:

Once the fall victim has been rescued and medical attention has been administered, there is an accident investigation process that need to be set in motion.

DP-6624 Accident Packet.
